further details.

CDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand CDNA was primed with a primer prepared by using trehalose thermo-activated reverse transcriptuse prepared by using trehalose thermo-activated reverse transcriptuse and subsequently enriched for full-length by cap-trapper. Second strand CDNA was prepared with the primer adapter of sequence[5] strand cDNA was prepared with the primer adapter of sequence[5] strand CDNA was prepared with the primer adapter of sequence[5] strand CDNA was prepared with the primer adapter of sequence[5] strand CDNA was prepared with the primer adapter of sequence[5] strand CDNA was prepared with the primer adapter of sequence[5] strand CDNA was prepared with the primer adapter of sequence[5] strand CDNA was prepared with the primer adapter of sequence[5] strand CDNA was prepared with the primer adapter of sequence[5] strand CDNA was prepared with the primer adapter of sequence[5] strand CDNA was prepared with the primer adapter of sequence[5] strand CDNA was prepared with the primer adapter of sequence[5] strand CDNA was prepared with the primer adapter of sequence[5] strand CDNA was prepared with the primer adapter of sequence[5] strand CDNA was prepared with the primer adapter of sequence[5] strand CDNA was prepared with the primer adapter of sequence[5] strand CDNA was prepared with the primer adapter of sequence[5] strand CDNA was prepared with the primer adapter of sequence transcripted to the primer adapter of sequence transcripted to the primer adapter of sequence transcripted to the primer adapter of the primer adapter of the primer adapter of the primer adapter of the primer adapter of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 18,

Sequence 1, Application US/09027337B
Patent No. 5972616
GENERAL INFORMATION:
APPLICANT: O'Brien, Timothy J.
APPLICANT: Tanimoto, Hirotoshi
TITLE OF INVENTION: TANG-15: An Extracellular Serine Protease Overexpressed i
TITLE OF INVENTION: Breast and Ovarian Carcinomas
FILE REPERBENCE: D6064
CURRENT APPLICATION NUMBER: US/09/027,337B
CURRENT FILING DATE: 1998-02-20
NUMBER OF SEQ ID NOS: 13

Sequence 18, Application US/09654600A

Patent No. 6649741

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: CALIMOTO, Hirotoshi
TITLE DF INVENTION: TANG-15: An Extracellular Serine Protease
TITLE DF INVENTION: Overexpressed in Carcinomas
FILE REFERENCE: D6064CIP/D

CURRENT APPLICATION NUMBER: US/09/654,600A

CHERENT FILING DATE: 2000-09-01

PRIOR APPLICATION NUMBER: 09/421,213
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       3147
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Length:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 200, Application US/09925301
Patent No. US20020052308A1
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: Nucleic Acids, Proteins and TITLE OF INVENTION: Nucleic Acids, Proteins and TITLE OF INVENTION: NUCLEIC ACIDS, Proteins and FILE REPRENCE: PAIO6
CURRENT APPLICATION NUMBER: US/09/925,301
CURRENT FILING DATE: 2000-03-08
PRIOR FILING DATE: 2000-03-08
PRIOR FILING DATE: 1999-03-12
NUMBER OF SEQ ID NOS: 1694
SOFTWARE: PatentIn Ver. 2.0
SEQ ID NOS: 1694
